Application/Control Number: 10/088,201 Page 2

Art Unit: 1764

1. Applicant's arguments have been fully and carefully considered. The examiner agrees that Gonjo et al. does not anticipate or render obvious applicant's invention as claimed. The examiner agrees that a Terminal Disclaimer is not required over the Lamla et al. patent as the claims are drawn to a heterogeneous catalysis device and that the concept of adding two or more components integral with the single plate such as an evaporating component, reforming component, catalytic heater and carbon monoxide reducing component has not been taught

2. The following is an examiner's statement of reasons for allowance:

The inventions relates to a compact and efficient hydrogen generating device wherein at least two component which includes (an evaporating component, reforming component, catalytic heater and carbon monoxide reducing component) are formed as integral portions of a common plate, the plat at least partially comprises a porous layer of pressed catalyst material through which reactants flow there through. The construction and arrangement has not been taught either singularly or in combination by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to N. Bhat whose telephone number is 571-272-1397. The examiner can normally be reached on Monday-Friday, 9:30AM-6:00PM.
